the 1990s, the number of people in the United States who are obese has increased by 50 percent. In 1990, 15 percent of the population was obese, and in 2000, 25 percent of the population was obese. The increase in obesity is a major public health concern because obesity is a major risk factor for heart disease, diabetes, and other chronic diseases. The Centers for Disease Control and Prevention (CDC) estimates that obesity costs the United States \$147 billion each year in medical costs and lost productivity. The CDC also estimates that obesity is responsible for 300,000 deaths each year in the United States. The increase in obesity is a result of a combination of factors, including changes in diet and lifestyle, and a decline in physical activity. The following are some of the factors that contribute to the increase in obesity:

[illegible]

There is a growing awareness that the current system of international law is inadequate to deal with the challenges of the 21st century. The current system is based on a model of state sovereignty that is increasingly outdated. The current system is also based on a model of international law that is increasingly outdated. The current system is based on a model of international law that is increasingly outdated. The current system is based on a model of international law that is increasingly outdated.

the 1990s, the number of people in the United States who are obese has increased by 50 percent. In 1990, 15 percent of the population was obese, but by 2000, that number had risen to 23 percent. In 2008, the number of obese people in the United States was estimated to be 33 percent of the population. The increase in obesity is a major public health concern because it is a leading cause of heart disease, diabetes, and other chronic diseases. The Centers for Disease Control and Prevention (CDC) estimates that obesity costs the United States \$147 billion in medical costs each year. The CDC also estimates that obesity is responsible for 280,000 deaths each year in the United States. The increase in obesity is a result of many factors, including changes in diet and lifestyle. In the 1990s, the average American consumed more calories than in previous decades, and many people began to lead more sedentary lifestyles. The combination of these factors led to a significant increase in the number of people who are obese. The CDC is working to address the problem of obesity through a variety of programs, including the National Physical Activity Plan and the National Dietary Guidelines. The CDC also encourages people to eat a healthy diet and to get regular exercise. The CDC estimates that if the current trend continues, the number of obese people in the United States will reach 40 percent by 2010. The CDC is working to prevent this by promoting healthy eating and physical activity. The CDC also encourages people to get regular checkups and to talk to their doctors about their weight. The CDC estimates that if the current trend continues, the number of obese people in the United States will reach 40 percent by 2010. The CDC is working to prevent this by promoting healthy eating and physical activity. The CDC also encourages people to get regular checkups and to talk to their doctors about their weight.

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets.
